

product-news July 2010

- **Dyna Fold Soft UV**

Paper re-softening agent with UV-light fluorescent additives. Makes it easy to see the softening-line on the paper, for all types of papers and jobs. You need a special black light at the folder to realize the softening-line. For some printers it is needless, - for some others it is a need!

- **Dyna Col AC 330LC**

Heatsetfount which makes the successful DynaCol IPA eliminating range complete. Outstanding performance regarding calcium built-ups on the ink-rollers and ink built-ups on the dampening rollers.

- **Dyna Col AC 308P**

Special heatsetfount for the production with 4% IPA and more.

- **Dyna Col AC 317Ci**

Heatsetfount special created for GOSS Sunday-presses. Even recommended for older presses if FOGRA-certification is not necessary. It keeps the plates free with a small level of dampening. **Important:** This fount is corrosion inhibited but it has no FOGRA-certification.

- **Dyna Col AC 301**

This is a modern formulated sheetfed-fount for printing without or a small amount of IPA.
